JEFFREY MONTOYA

Systems & Automation Engineer

Dover, NJ · (201) 841-9697 · montjeffrey@gmail.com · linkedin.com/in/montjeffrey · github.com/montjeffrey · montjeffrey.dev

SUMMARY

I turn messy business processes into reliable software: production CRM platforms, API integrations, ETL and job queues, plus the developer tooling around them. Comfortable between the people who run the business and the code that runs it. TypeScript, Python and Go; 14 merged pull requests to a widely used open-source Claude Code toolkit. Bilingual English/Spanish.

SKILLS

Languages: TypeScript, Python, Go, SQL, JavaScript

Data & backend: PostgreSQL/Supabase, Redis/BullMQ, Celery, Next.js, Node.js, Flask, Playwright, REST APIs, OAuth 2.0, webhooks, ETL

Platform & DevOps: Docker, GitHub Actions CI/CD, Linux, Tailscale, Azure, AWS (training), Netlify, DNS

AI tooling: MCP servers, Claude Code / Codex / Gemini agents, evaluation harnesses, human-approval gates

Business systems: QuickBooks Online, Orcatec, ADP, Salesforce, Lawmatics, Docketwise, Microsoft 365, Google Workspace

EXPERIENCE

Data Administrator (Systems & Automation), Divine Energy Solutions Inc. Dec 2025 – Present

Dover, NJ · HVAC, insulation and weatherization contractor working NJ utility and clean-energy programs.

- Designed and deployed the company's production CRM (Next.js, TypeScript, Supabase/PostgreSQL), replacing fragmented program, customer and job tracking with one source of truth and leadership KPI dashboards.
- Built exactly-once async processing: a transactional outbox with idempotency keys feeding Redis/BullMQ, proven by a chaos test that SIGKILLs the worker mid-batch and asserts zero duplicate or lost records.
- Integrated QuickBooks Online over OAuth 2.0 for invoice and payment sync, running as an unprivileged Docker worker with credentials mounted as secret files rather than environment variables.
- Built CRM-to-CRM ETL (Comfort Partners measure codes into Orcatec job creation, plus SnuggPro), eliminating duplicate manual entry across program systems.
- Automated technician productivity reporting in Python and Playwright: reconciled Orcatec jobs against ADP hours with fuzzy matching and produced the KPI dashboards used for bonus eligibility.

Freelance Developer & Consultant, Self-employed Mar 2025 – Present

Remote

- Shipped and maintain production sites for three local businesses: elevatehrg.com (Next.js, county and city service pages, validated lead capture), thegenzmama.com (Next.js, TypeScript) and levelzbarberstudio.com (hand-coded static site with Booksy booking).
- Handle hosting, DNS, deployments, structured data and local SEO end to end.

Legal Assistant / Administrative Marketing Assistant, The Scheer Immigration Law Group Nov 2022 – Feb 2025

Morristown, NJ

- Built Excel pipelines that normalized lead data from each marketing partner into one tracking view, showing which sources produced qualified clients.
- Administered Lawmatics (CRM) and Docketwise (CMS) across 1,000+ clients and 5,000+ records, keeping data consistent and audit-ready.
- Ran the digitization of sensitive client documents: reorganized the file system and kept a complete log of every document as it was scanned and secured.

Earlier experience

- **Operations Manager**, CVS Health, Rockaway, NJ (2020 – 2022): Pharmacy systems support, Salesforce customer-experience cases, inventory audits and payroll reconciliation under HIPAA.
- **Mentor / IT Support**, Dover College Promise, County College of Morris, Dover, NJ (2019 – 2022): Sole IT resource for the program's network, wireless and endpoints; mentored students in technical and professional skills.
- **Team Lead**, Suttle & King, NJ (2019): B2B Verizon Business and SaaS sales, pipeline tracked in Salesforce.

OPEN SOURCE & PROJECTS

ECC upstream contributions (github.com/affaan-m/ECC · ~298k-star Claude Code toolkit): 14 merged pull requests: evaluation graders that check content and count only valid trials, prompt-time skill suggestions from an indexed registry, CI validation of plugin runtime closure, and Windows hook and test fixes.

agent-harness (Python, stdlib only, MCP · github.com/montjeffrey/agent-harness): Portable memory and code-graph toolkit for coding agents (Claude Code, Codex, Gemini): an MCP server, bounded project memory with provenance rules, human review gates before any entry counts, and blast-radius analysis. 12-job CI matrix (3 OS × 4 Python versions), actions pinned to commit SHAs.

landfirst (Go TUI · github.com/montjeffrey/landfirst): Merge planner for repos with heavy parallel work. Comparing git patch IDs instead of commit hashes cut false "unlanded work" reports from 2,073 to 45 on a real repo; predicts conflicts with git merge-tree and never rewrites history or force-pushes.

compute-pool (Go, Tailscale · github.com/montjeffrey/compute-pool): Shares CPU across your own devices over Tailscale, routing work to the least-loaded node with a live dashboard. Callers are identified with tailscale whois; the repo documents a threat model, runs CodeQL and OpenSSF Scorecard, and ships scripts to audit, check and then enforce Windows App Control for self-signed builds.

Sports analytics pipeline (Python, Flask, Celery, Redis, PostgreSQL · private): Six-sport ingestion and nightly grading with a model-versus-market evaluation harness (Brier score against de-vigged odds, closing-line audit) that blocks publication when the model shows no measured edge.

tailnet-sentry (Go · github.com/montjeffrey/tailnet-sentry): Defensive CLI over the Tailscale API: inventories your own tailnet, baselines known devices, flags anomalies and quarantines them, with a locked, append-only audit log. Releases ship six static binaries with SHA256SUMS and signed provenance attestations; CI scans dependencies for vulnerabilities and code for secrets.

CERTIFICATIONS

CompTIA Security+ (2026)

Bugcrowd: accepted vulnerability finding

Cisco CCNA: in progress · CompTIA CySA+: planned

CompTIA A+ / Network+ / Security+ training, LasComp Institute of IT (2025)

AWS Cloud Practitioner training, Skillsoft (9 courses, 2025)

freeCodeCamp: Responsive Web Design; JavaScript Algorithms & Data Structures

EDUCATION

New Jersey Institute of Technology: Electrical Engineering coursework (69 credits)

County College of Morris: Business Administration coursework (finance)
